Resumo executivo

Resultado principal: O modelo identificou corretamente todos os 25 casos positivos de 8a e rejeitou corretamente todos os 25 casos negativos. Foram obtidos TP = 25, TN = 25, FP = 0 e FN = 0; precisão, recall, acurácia e F1 = 100%.

O teste avaliou exclusivamente a capacidade do GPT-5.6 Thinking de detectar, em nível de sentença, a presença da categoria 8a - demonstrative determiners. A categoria abrange this, that, these e those quando determinam um substantivo ou sintagma nominal explicitamente realizado, como em this idea e those conversations.

O conjunto de teste foi construído antes da execução e contém 50 frases autênticas do corpus humano: 25 positivas e 25 negativas, todas com pelo menos 20 palavras. A saída oficial foi produzida em uma conversa nova, com etiquetagem item a item. A primeira tentativa, que agregou as etiquetas no final de cada sentença, foi excluída por não cumprir o formato solicitado.

Escopo do resultado: O desempenho de 100% refere-se somente à decisão de presença ou ausência de 8a. O relatório não valida automaticamente todas as demais etiquetas atribuídas pelo modelo nas 50 sentenças.

1. Objetivo e pergunta de avaliação

O objetivo foi avaliar se o GPT-5.6 Thinking identifica corretamente a categoria 8a do tagset de inglês em frases autênticas. A unidade de decisão foi a sentença: cada uma deveria ser classificada como contendo ou não contendo pelo menos uma ocorrência de demonstrative determiner.

Pergunta de avaliação: em um teste balanceado de 50 sentenças, qual é o desempenho do modelo na detecção da categoria 8a, medido por true positives, true negatives, false positives, false negatives, precision e recall?

2. Definição operacional da categoria 8a

Definição do tagset: 8a. demonstrative determiners: this (e.g. this idea is good.), that, these, those.

Foi considerado positivo o uso de this, that, these ou those como determinante de um substantivo ou sintagma nominal explicitamente realizado. Foram considerados negativos os usos pronominais independentes, os usos de that como complementizador, os usos de that como relativo e as frases sem qualquer forma demonstrativa relevante.

Exemplo	Decisão para 8a	Razão
this idea	YES	this determina o substantivo idea

Exemplo	Decisão para 8a	Razão
those conversations	YES	those determina conversations
I'll do this.	NO	this funciona independentemente como pronome
This is difficult.	NO	This é sujeito pronominal
I think that she left.	NO	that introduz uma oração completiva
the friend that called	NO	that introduz uma oração relativa

3. Materiais e construção do conjunto de teste

- Corpus-fonte: pasta 05_human, com 2.855 textos humanos do corpus de autoexposição sobre solidão.
- Composição: 50 sentenças completas, sendo 25 positivas e 25 negativas para 8a.
- Extensão mínima: todas as sentenças possuem pelo menos 20 palavras.
- Autenticidade: a grafia e a gramática originais foram preservadas; apenas espaços e quebras artificiais de linha foram normalizados.
- Rastreabilidade: o arquivo de origem de cada sentença foi registrado antes do teste.
- Ordem: positivas e negativas foram embaralhadas antes da aplicação.
- Gabarito: a decisão YES/NO foi preparada antes da execução do modelo.

3.1 Composição dos casos negativos

Tipo de negativo	Quantidade
Caso positivo de 8b (demonstrative pronoun)	10
that complementizador	6
that relativo	5
Frase sem this/that/these/those demonstrativo	4
Total	25

3.2 Registro técnico da execução

Item	Registro
Modelo	GPT-5.6 Thinking
Data	3 de agosto de 2026
Tagset	English Tagset 2026-08-03
Arquivo de tagset usado	tagset_en_2026-08-03_clean.md
Arquivo de teste	english_8a_test_official_authentic.txt
Número de sentenças	50
Distribuição	25 YES / 25 NO
Modo de aplicação	Conversa nova; envio sequencial de instrução, tagset, teste e START TAGGING
Correções após a saída	Nenhuma

Observação sobre o tagset: A cópia utilizada foi preparada a partir da atualização de 03/08/2026 compartilhada no grupo. Foram removidas repetições editoriais evidentes e corrigido o lapso “they ate causing” para “they are causing”. As categorias 8a e 8b foram mantidas exatamente como comunicadas.

4. Procedimento de aplicação

1. Foi aberta uma conversa nova com o GPT-5.6 Thinking.

2. Foi enviada uma instrução determinando etiquetagem item a item e proibindo listas agregadas de etiquetas no final da sentença.
3. O tagset 2026-08-03 foi anexado e o modelo confirmou sua leitura.
4. O arquivo com 50 sentenças foi anexado e o modelo confirmou ter recebido exatamente 50 itens.
5. A execução foi iniciada somente com a mensagem START TAGGING.
6. A primeira resposta completa no formato correto foi preservada sem correção, negociação ou nova tentativa.

4.1 Tentativa anterior excluída

Em uma tentativa anterior, o modelo reuniu todas as etiquetas de cada frase em um único conjunto de chaves no final da sentença. Embora essa saída permitisse inferir a presença ou ausência de 8a, ela não permitia verificar a atribuição item a item e contrariava o formato do projeto. Por isso, essa tentativa foi registrada como execução inválida quanto ao formato e não foi usada como resultado oficial.

Critério de exclusão: A exclusão ocorreu antes da análise do desempenho e por uma razão formal previamente identificável: ausência de associação das etiquetas aos itens individuais.

5. Conversão da saída para YES/NO

O modelo devolveu a etiquetagem completa, e não uma lista binária. Para comparar a saída com o gabarito, cada sentença foi convertida de acordo com a presença da etiqueta específica 8a:

- Presença de {8a} em qualquer item da sentença = resposta do GPT igual a YES.
- Ausência de {8a} em toda a sentença = resposta do GPT igual a NO.
- A etiqueta agregada {906} não foi usada como substituta de 8a.

A classificação da comparação seguiu as quatro possibilidades abaixo:

Gabarito	GPT	Classificação	Interpretação
YES	YES	TP	A categoria estava presente e foi detectada.
NO	NO	TN	A categoria estava ausente e foi corretamente rejeitada.
NO	YES	FP	A categoria estava ausente, mas foi marcada.
YES	NO	FN	A categoria estava presente, mas não foi marcada.

6. Resultados quantitativos

Gabarito / GPT	GPT = YES	GPT = NO	Total
Gabarito = YES	25	0	25
Gabarito = NO	0	25	25
Total	25	25	50

Métricas finais

Medida	Fórmula aplicada	Resultado
True positives (TP)	-	25
True negatives (TN)	-	25
False positives (FP)	-	0

Medida	Fórmula aplicada	Resultado
False negatives (FN)	-	0
Precision	$25 / (25 + 0)$	100.0%
Recall	$25 / (25 + 0)$	100.0%
Accuracy	$(25 + 25) / 50$	100.0%
Specificity	$25 / (25 + 0)$	100.0%
F1-score	$2 \times (\text{precision} \times \text{recall}) / (\text{precision} + \text{recall})$	100.0%

6.1 Cálculos

$\text{Precision} = TP / (TP + FP) = 25 / (25 + 0) = 1.00 = 100.0\%$
 $\text{Recall} = TP / (TP + FN) = 25 / (25 + 0) = 1.00 = 100.0\%$
 $\text{Accuracy} = (TP + TN) / 50 = (25 + 25) / 50 = 1.00 = 100.0\%$
 $F1 = 2 \times (\text{Precision} \times \text{Recall}) / (\text{Precision} + \text{Recall}) = 1.00 = 100.0\%$

6.2 Resultado em linguagem direta

O GPT-5.6 Thinking encontrou todas as 25 ocorrências reais de demonstrative determiners e não produziu nenhuma marcação 8a nas 25 sentenças negativas. Consequentemente, não houve falsos positivos nem falsos negativos neste conjunto de teste.

Síntese: TP = 25; TN = 25; FP = 0; FN = 0; precision = 100%; recall = 100%.

7. Auditoria sentença por sentença

A tabela apresenta o gabarito preparado antes da execução, a decisão derivada da saída do GPT, a classificação obtida e a justificativa linguística de cada item. Como não houve divergências, os 25 casos positivos são TP e os 25 negativos são TN.

8. Interpretação, limitações e reprodutibilidade

8.1 Interpretação

O resultado indica que, sob o prompt, o tagset e o conjunto de teste registrados, o modelo distinguiu sem erro demonstrative determiners de demonstrative pronouns, de that complementizador, de that relativo e de sentenças sem demonstrativo. A presença de negativos estruturalmente próximos fortalece a interpretação de que o modelo não se limitou a marcar qualquer ocorrência superficial de this, that, these ou those como 8a.

8.2 Limitações

- O conjunto contém 50 sentenças e não representa todas as construções possíveis do inglês.
- As frases provêm de um corpus temático e de um registro específico de autoexposição digital.
- O resultado se refere a uma execução específica do GPT-5.6 Thinking em 03/08/2026; novas execuções podem variar.
- A avaliação foi binária em nível de sentença. Não foi realizada uma auditoria integral da correção de todas as demais etiquetas.
- A cópia do tagset de 03/08/2026 foi derivada da mensagem do grupo e limpa de duplicações editoriais; deve ser substituída por uma versão oficial do repositório quando esta estiver disponível.

8.3 Condições de reprodutibilidade

- Usar o mesmo arquivo de tagset registrado no Apêndice D.
- Usar exatamente o mesmo arquivo de 50 sentenças e a mesma ordem.
- Aplicar o prompt integral do Apêndice C em uma conversa nova.
- Não informar ao modelo que o teste contém 25 positivos e 25 negativos.
- Não fornecer o gabarito antes da execução.
- Preservar a primeira saída completa e não corrigida.
- Converter a presença específica de {8a} em YES e a ausência em NO.

9. Conclusão

No conjunto avaliado, o GPT-5.6 Thinking apresentou desempenho perfeito na detecção da categoria 8a - demonstrative determiners. Todos os casos positivos foram identificados e todos os negativos foram rejeitados, resultando em precision e recall de 100%. Esse achado demonstra desempenho robusto neste teste controlado, mas deve ser interpretado dentro dos limites do conjunto, do registro textual, do prompt e da versão do tagset utilizados.

9.1 Formulação breve em inglês

GPT-5.6 correctly identified all 25 positive instances of demonstrative determiners and correctly rejected all 25 negative cases. The evaluation yielded 25 true positives, 25 true negatives, no false positives, and no false negatives. Precision and recall were both 100% for category 8a in this test set. These results apply specifically to sentence-level detection of category 8a and do not constitute a validation of every other tag assigned in the model output.

Apêndice C - Prompt e mensagens de aplicação

C.1 Instrução inicial

You will act as an automatic English language-feature tagger.

I will send you:

1. the official English tagset;
2. a numbered test file containing exactly 50 sentences.

Do not tag, classify, or analyze anything until I write: START TAGGING.

When tagging begins, follow these formatting rules exactly:

1. Preserve the original sentence numbering, wording, spelling, capitalization, and punctuation.
2. Place the applicable tags immediately after the individual word or item to which they apply.
3. Do not collect the tags for the whole sentence in a single set of braces at the end of the sentence.
4. Return one fully tagged sentence for each original numbered sentence.
5. Use exactly this token-level format:

I {4,906} don't {84,108} think {27,81,907} they {6,906} had {24,32b} known {27,907} this {8b,906} was {23,31} not the {2} case {10,15}.

Incorrect format – do not do this:

I don't think they had known this was not the case. {2,4,6,8b,23,24,27,31,32b,906,907}

Apply the complete tagset exactly as provided. Return only the 50 fully tagged sentences. Do not explain the tags, correct the sentences, summarize the text, or discuss your decisions.

Wait for the official tagset, the numbered test file, and START TAGGING.
